App Flow — Leish! Aesthetic Marketplace

Document	03 — Application Flow & Information Architecture
Version	1.0
Date	2026-10-08
Companion	01-prd.md · 02-trd.md

---

1. Navigation Model

There is no URL router today — navigation is a Zustand `activeTab` view machine rendered inside `AnimatePresence` in `src/App.tsx`.

Navbar groups (`src/components/Navbar.tsx`):

Group	Items	Visibility
`PRIMARY_ITEMS`	Discover, AI Lookbook, AI Advisor	Always
`TOOL_ITEMS`	Workspace, My Bookings	Workspace + My Bookings in "More ▾" for guests; account me
`SALON_ITEM`	Salon Portal	Visible to guests (acquisition) and providers; hidden from sign

Interaction details: `layoutId` animated active pill · scroll-condense header · `Cmd/Ctrl+K` jumps to Discover and focuses `#hero-search` · `Escape` closes menus · responsive mobile disclosure with grouped sections · `aria-expanded` / `aria-controls` · visible focus rings.

Overlay modals (orthogonal to tabs): `AuthModal`, `BookingModal`, `ProfileModal`.

---

2. Information Architecture (Sitemap)

```
explore ──────────── Explore (Discover)
 │                    ├─ Hero (search, category chips, rating filter, sort)
 │                    ├─ MUA grid (MUACard)
 │                    ├─ Studio grid (SalonCard)
 │                    ├─ InteractiveMap (markers → info window → view)
 │                    └─ SalonDetails  ← selectedSalon
 │                         ├─ gallery / services / staff / hours / reviews
 │                         ├─ AI review summary (vibe · bestFor · tip)
 │                         ├─ travel-quote estimate
 │                         └─ [Book] ─→ BookingModal
lookbook ──────────── AI Lookbook Studio
 │                    ├─ trend inputs → LookbookItem spec
 │                    └─ [Book This Look] ─→ BookingModal (moodboard attached)
ai-stylist ────────── AI Advisor
 │                    ├─ goals / skin profile / occasion wizard
 │                    └─ recommended services → SalonDetails
```

```
workspace ──────────── Google Workspace Hub (9 sub-tabs)
 │                       overview · gmail · drive · docs · forms ·
 │                       tasks · contacts · chat · classroom
client ──────────────── Client Portal
 │                       ├─ appointment feed (status badges)
 │                       ├─ cancel appointment
 │                       └─ leave review
provider ────────────── Provider Dashboard (4 sub-tabs)
                         ├─ appointments (status transitions)
                         ├─ services (CRUD)

3. Actors & Entry States

Actor	Signed out	Signed in (client)	Signed in (provider)
Landing state	Explore	Explore + account menu	Explore + account m
Client Portal	Sign-in prompt	Full access	—
Salon Portal	Acquisition CTA → sign-in	Hidden in nav	Full access (4 sub-ta
Booking funnel	Allowed (details captured in form)	Prefilled from profile	—
Workspace	Overview only → Google sign-in	Google OAuth required for actions	Google OAuth requir

---

4. Core Flow — Guest Discovery → Booking (P0)

```
[Land: Explore]
   │  type in #hero-search (Cmd+K) / pick category chip / set rating filter
   ▼
[Filtered results: MUACard grid + SalonCard grid] ── empty? ──▶ [Empty state + clear filters]
   │
   │  optional: InteractiveMap → marker → InfoWindow → "View Profile"
   ▼
[SalonDetails]
   │  browse gallery, services, staff, hours, reviews
   │  AI summary block loads (Gemini · shows fallback label if degraded)
   │  optional: travel-quote estimate (venue → pseudo distance + fee)
   ▼
[BookingModal]
   ├─ Step 1  Date & time            (validated: future date, valid time slot)
   ├─ Step 2  Client details         (name, email, phone, notes)
   │          + on-location toggle   (venue → travel surcharge)
   │          + optional moodboard   (from Lookbook)
   ├─ Step 3  Review & Confirm
   ▼
[POST /api/bookings → status: 'pending']
   ├─ success ─▶ [Confirmation state] ─▶ booking appears in Client Portal
   └─ error   ─▶ inline error banner (retry)   ← must never fail silently
```

Requirements: every step preserves state on back-navigation; the modal is keyboard-trappable; errors render inline, not in console.

---

5. Flow — AI Lookbook → Booking (P1)

```
[Lookbook tab]
   │  choose occasion / category / preferences
   ▼
[POST /api/gemini/trends-lookbook]  (googleSearch grounding, 7s race)
```

```
   ├─ model ok ──▶ [LookbookItem spec]
   │                palette hexes · complexion · eye · lip · longevity
   │                groundedTrendContext (cited trends)
   │                recommendedSalonId + service (deep link)
   └─ timeout/err ─▶ [curated fallback look] + "sample look" label
   ▼
[Save/inspect spec] ── [Book This Look] ─▶ BookingModal (Step 2 pre-attaches
                                            lookName, palette, lipFormula, eyeStyle)
   ▼
[Booking confirmed with attachedMoodboard]
```

---

6. Flow — AI Advisor (P1)

```
[AI Advisor tab]
   │  Step 1: goals (free text)  →  Step 2: skin/hair profile  →  Step 3: occasion
   │  optional: preferred category
   ▼
[POST /api/gemini/advice]  (JSON responseSchema)
   ▼
[Recommendation screen]
   ├─ recommendationText (prose)
   └─ suggestedServices[] — each: service · salon · est. price · reason
        └─ [View] ─▶ SalonDetails (deep link) ─▶ booking funnel
```

---

7. Flow — Auth (P0)

```
[AuthModal]
   ├─ Sign in          (email + password → POST /api/auth/login → JWT 7d)
   ├─ Create account   (name, email, password, role → POST /api/auth/register)
   └─ Demo quick-login (client demo / provider demo)
   ▼
[localStorage: leish_auth_user, leish_auth_token  +  zustand persist]
   ▼
[Navbar re-renders: account menu replaces "More ▾"; nav groups recomputed]
   ├─ role=client   → Salon Portal hidden, My Bookings visible
   └─ role=provider → Salon Portal visible with full dashboard
```

Session restore: store hydrates on boot; `GET /api/auth/me` validates the token and refreshes the profile; an invalid/expired token clears state silently and returns the user to guest mode.

---

8. Flow — Client Portal (P0)

```
[client tab]
   ├─ guest ─▶ [Sign-in prompt] ─▶ AuthModal
   └─ signed in
        ▼
[Appointment feed]  GET /api/bookings?email=<user email>
   ├─ upcoming / past sections, status badges (pending · confirmed · completed · cancelled)
   ├─ [Cancel]  → PATCH /api/bookings/:id/status {cancelled}   ⚠ requires Authorization
   │              └─ confirm dialog → optimistic update → rollback on failure
   └─ [Leave review] (completed only) → POST /api/reviews → appears on SalonDetails
```

---

9. Flow — Provider Dashboard (P0)

```
[provider tab]
   ├─ guest ─▶ [Acquisition CTA] → AuthModal (demo provider)
```

```
   ├─ client → ➤ nav hides the entry
   └─ provider (user.salonId set)
        ▼
   ┌─ appointments ──────────────────────────────────────┐
   │  GET /api/bookings?salonId=<own>                    │
   │  pending → [Confirm] → confirmed → [Complete] → completed │
   │  pending/confirmed → [Cancel]                       │
   │  ⚠ all four mutations currently omit Authorization  │
   ├─ services                                           │
   │  list + [Add service] + [Edit] + [Delete]  → /api/salons/:id/services*
   ├─ profile                                            │
   │  edit name, tagline, description, hours, gallery    │
   │  → PUT /api/salons/:id   (⚠ ownership check required)  │
   └─ audit
      POST /api/gemini/quality-audit → score + prioritized fixes
```

Authorization rule (TR-7): providers may only touch `user.salonId`; admins may touch any. Enforced server-side in middleware, not in the UI.

---

10. Flow — Google Workspace Hub (P2/P3)

```
[workspace tab]
   ├─ Overview  → status tiles + "Connect Google Account"
   └─ Google sign-in (Firebase provider) → consent for scopes:
      drive.readonly · drive.file · gmail.send · gmail.readonly ·
      documents.readonly · forms.responses.readonly · tasks ·
      contacts.readonly · chat.spaces
        ▼
   gmail    compose → send (RFC822 base64url)        → confirmation emails
   drive    list files                                → contracts, moodboards
   docs     list + create + batchUpdate               → consultation notes
   forms    list + responses                          → intake forms
   tasks    list + create                             → follow-ups
   contacts list                                      → client directory
   chat     list spaces + post message                → team updates
   classroom list courses + create                    → masterclass admin
```

State: the access token is cached **in memory only** today → every reload re-auths. Requirement: persist with refresh-token rotation, or make re-auth explicit and clearly communicated.

---

11. Cross-Cutting States

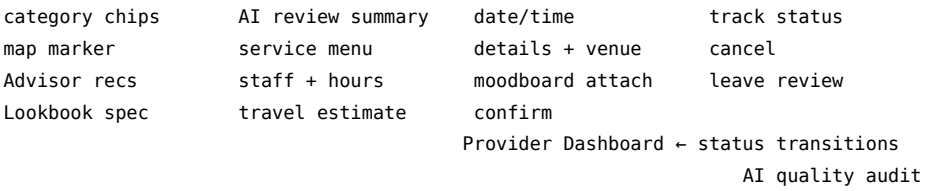

State	Behavior
Loading	Skeleton cards for grids; stepped progress for the 3-step modal; AI calls show an indeterm
Empty	Filter-aware empty states with a ”clear filters” recovery action; portal-specific ”no appoin
Error	Inline banner with retry; `ErrorBoundary` wraps the React root; AI errors degrade to labeled fal
Fallback AI	Response carries `source: 'fallback'` → UI shows a quiet ”sample result” chip (TR-3)
Offline/degraded	React Query retries once, then serves `placeholderData`; booking CTA disabled with an explan
Auth expiry	401 → clear session → preserve intended route → prompt sign-in
Concurrent edit	Status changes are last-write-wins in v1; v2 adds optimistic concurrency (`updatedAt` check)

---

12. End-to-End Journey Map

```
AWARENESS          CONSIDER           DECIDE             POST-BOOK
─────────          ────────           ──────             ─────────

Explore hero   →   SalonDetails   →   BookingModal   →   Client Portal
```

---

13. Flow-Level Requirements Summary

ID	Requirement	Priority
FL-1	Booking submit must show success or an actionable inline error — never fail silently	P0
FL-2	All provider/client mutations send the JWT (single HTTP client)	P0
FL-3	Guest → sign-in prompts preserve the intended destination	P1
FL-4	Lookbook → booking carries the moodboard through all 3 steps	P1
FL-5	Deep links from Advisor/Chat/Map land on the correct detail view	P1
FL-6	URL reflects the current view (shareable/back-button)	P1
FL-7	Every AI surface labels fallback output	P1
FL-8	Mobile: all flows usable at 360px; nav disclosure groups sections	P1
