Data Dictionary — Leish! Aesthetic Marketplace

Version: 1.0 · **Date:** 2026-10-12 · **Source:** `src/types.ts`, API schemas and `server/data-store.ts`

Conventions

- IDs are opaque strings and must not be interpreted by clients.
- Timestamps are ISO 8601 strings in UTC.
- `date` is a local calendar date in `YYYY-MM-DD`; `time` is the user-facing local time.
- Prices are numeric RM amounts; distance is numeric kilometers.
- Server responses must never expose password hashes or private booking data to unauthorized callers.

User

Field	Type	Required	Rules
`id`	string	yes	Unique opaque identifier
`name`	string	yes	Non-empty display name
`email`	string	yes	Normalized email; unique for login
`role`	enum	yes	`client`, `provider`, `admin`
`phone`	string	no	User-supplied contact value
`avatar`	string	no	Safe image URL
`salonId`	string	provider	Provider ownership anchor
`bio`	string	no	Profile text
`createdAt`	ISO string	yes	Creation timestamp

Salon / MUA listing

Field	Type	Required	Rules
`id`	string	yes	Unique listing identifier
`type`	enum	yes	`studio` or `mua`
`name`, `tagline`, `description`	string	yes	Public catalog content
`rating`	number	yes	Display rating, bounded to 0–5
`reviewCount`	integer	yes	Zero or greater
`location`, `address`	string	yes	Public location copy
`image`, `gallery[]`	URL/string[]	yes	Portfolio media
`category`	string	yes	Catalog category
`services[]`	Service[]	yes	Provider-owned service menu
`staff[]`	StaffMember[]	no	Studio staff roster
`workingHours`	object	no	Day/time availability description
`travelRadius`	number	MUA	Radius in km
`startingPrice`	number	no	RM amount

Service and staff

`Service` contains `id`, `name`, `price` (RM), `duration` (minutes), `description`, and `category`. `StaffMember` contains `id`, `name`, `role`, `avatar`, and `rating`.

Booking

`Booking` contains `id`, `salonId`, `salonName`, `salonAddress`, `serviceId`, `serviceName`, `servicePrice`, `serviceDuration`, optional `staffId`/`staffName`, `date`, `time`, `clientName`, `clientEmail`, `clientPhone`, optional `notes`, `status`, `createdAt`, optional `isLocation-Event`, `eventVenue`, `travelSurcharge`, and `attachedMoodboard`.

`status` is one of `pending`, `confirmed`, `completed`, `cancelled`. The API must treat client email and salon ownership as authorization attributes, not as trusted client input.

Review and moodboard

`Review` contains `id`, `salonId`, `clientName`, `rating`, `text`, and `date`. A `LookbookItem` contains look name, category, vibe, palette entries, complexion, eye artistry, lip formula, longevity features, optional grounded trend context, recommended salon/service, hero image and lighting guidance.

Persistence mapping

Logical entity	Current local store	Intended durable store
Users	`users` array in JSON	Firestore `users/{id}`
Salons	`salons` array in JSON	Firestore `salons/{id}`
Bookings	`bookings` array in JSON	Firestore `bookings/{id}`
Reviews	`reviews` array in JSON	Firestore `reviews/{id}`

The JSON store is a development/test fallback. Production selection must be explicit and verified with migration, concurrency and redeploy tests.
