Leish! — Documentation Set

Product, requirements, design, engineering, testing, security, and operations documentation for **Leish! Aesthetic Marketplace**. The original baseline was generated from the codebase on 2026-10-08; the expanded development pack was completed on 2026-10-12.

#	Document	Purpose
01	PRD	Problem, personas, goals, epics & functional requirements, metrics, risks, release
02	TRD	Architecture, stack, domain model, API contract, auth/security, AI integration, kn
03	App Flow	Navigation model, sitemap, actor states, 8 core user flows, cross-cutting states
04	Design Brief	Brand positioning, design principles, typography, color roles, components, motio
05	Background Scheme	Espresso-gallery elevation ladder, gradients, glow orbs, scrims, CTA gradients, pe
06	Implementation Plan	5 phases (32 eng-days), tasks with acceptance criteria, milestones, risks, definiti
07	Launch Runbook	Deployment preflight, environment variables, smoke tests, monitoring, rollback a
08	SRS	Software requirements specification: system behavior, interfaces, quality attribu
09	Use Cases	Actor catalog, use-case narratives, alternate paths and acceptance outcomes
10	Data Dictionary	Domain entities, fields, validation, ownership and persistence mapping
11	API Specification	HTTP contract, authentication, request/response examples, errors and authorizat
12	Test Plan	Test strategy, cases, environments, release gates and current coverage gaps
13	Security & Privacy	Threat model, privacy controls, secrets, abuse prevention and incident response
14	Traceability Matrix	Traceability from product goals through requirements, tests and release criteria
15	Architecture Decisions	Decision records for SPA architecture, Gemini, Firebase, persistence, routing and

Reading order: PRD → SRS → Use Cases → TRD → API Specification → Data Dictionary → App Flow → Design Brief → Background Scheme → Test Plan → Security & Privacy → Implementation Plan → Launch Runbook → Traceability → Architecture Decisions.

Status at time of writing: Phase 0 is complete and deployed to production. Repository-safe portions of Phases 1–4 are implemented, including authorization hardening, routing, lazy-loaded surfaces, accessibility safeguards, analytics/SEO foundations and the launch runbook. Production Firestore verification, real geocoding, consent-backed analytics, full Workspace write flows, payments, real availability, and physical-device visual/accessibility validation remain open. See 06-implementation-plan.md and 07-launch-runbook.md.
